Vanavasam By Kannadasan Pdf Free 57

1969: Shakey,[32] a robot, combines locomotion, perception, and problem solving (Stanford Research Institute).

1979: The first computer-controlled autonomous vehicle, the Stanford Cart, is built.

1983: Danny Hillis co-founds Thinking Machines, the first company to produce massively parallel computers.

1985: The drawing program, AARON,[33] created by Harold Cohen, is demonstrated at AI conference.

1990s: Major advances in all areas of AI. Significant demonstrations in machine learning, intelligent tutoring, case-based reasoning, multi-agent planning, scheduling, uncertain reasoning, data
---

[31] Joseph Weizenbaum (MIT) built ELIZA, an interactive program that carries on a dialogue in English on any topic. It was a popular toy at AI centers on the ARPA-net when a version that "simulated" the dialogue of a psychotherapist was programmed ("A Brief History of Artificial Intelligence," <http://www.aaai.org/AITopics/bbhist.html> [accessed 27 January 2004]). An online example of ELIZA can be found at <http://www-ai.ijs.si/cgi-bin/eliza/eliza_script> (accessed 27 January 2004).

[32] Stanford's Cart and SRI's Shakey: The "Stanford Cart" (a) and SRI's "Shakey" (b) were the first mobile robots to be controlled by computers (large mainframes doing about a quarter million calculations per second, linked to the robots by radio). Both used television cameras to see. The Cart could follow white lines quite reliably; Shakey could find large prismatic objects somewhat less reliably (<http://www.frc.ri.cmu.edu/~hpm/project.archive/robot.papers/2000/revo.slides/1970.html> [accessed 27 January 2004]).

[33] AARON exists; it generates objects that hold their own more than adequately, in human terms, in any gathering of similar, but human-produced, objects, and it does so with a stylistic consistency that reveals an identity as clearly as any human artist's does. It does these things, moreover, without my own intervention. I do not believe that AARON constitutes an existence proof of the power of machines to think, or to be creative, or to be self-aware, to display any of those attributes coined specifically to explain something about humans. It constitutes an existence proof of the power of machines to do some of the things we had assumed required thought and which we still suppose would require thought and creativity and self-awareness of a human being. If what AARON is making is not art, what is it exactly, and in what ways, other than its origin, does it differ from the "real thing"? If it is not thinking, what exactly is it doing? ("Art," <http://www.aaai.org/AITopics/html/art.html> [accessed 27 January 2004]).

This PDF document is an example of an article on 'The World of Mind Games' which gives a detailed look at 'The Universe of Mind Games' or simply the world of mind game. The article gives you a look into some the world of mind games, a fascinating look at a mind game, and provides a few examples of the many games to be played in the world of mind game. The article contains some of the most popular mind games and their definitions, such as that of Baccarat, the Poker Game of Risk, and that of Monopoly. The author provides a description of each of the game, which is a good resource for parents, teachers and players of any age or skill level. A big feature of the article is that it offers a comprehensive look at all types of mind games, the various types of mind games with their names, and also a look at each of the game's rules. The author discusses these rules in detail and offers many examples of games that will appeal to many play styles. The article also explains why there is an advantage to the player or the team when they are learning to mind games. The article includes various examples of Mind Games in children's educational schools, as well as in public schools and community programs. The article also includes an example of playing the game of 'Tantrum' on a blackboard with a white board, which allows for a very creative and educational play..
